

UNMATCHED OPTION FOR YOUR LANDSCAPING PROJECTS

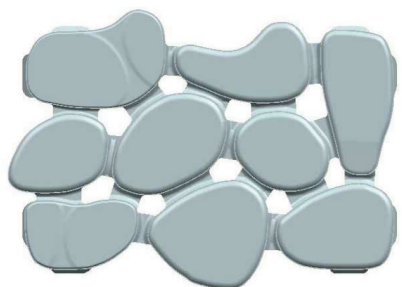

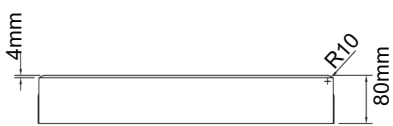

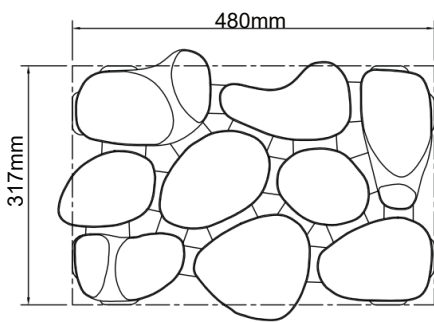

The PEBBLE AND GRASS paver is a permeable paver that gives the feeling of embedding pebbles on the grass. Not just that it is also motorable. Use them in your garden for a firm grip or in parking areas to take the load of a vehicle.

PEBBLE AND GRASS

- Can be used to blend a pebbled pathway with green grass augmenting your pathway design with nature.
- The pavers are maintenance-free as they can be removed to manicure the grass and inserted again with fresh saplings. A long term investment.
- Water just seeps through the permeable paver giving the elixir to the grass below. Also the rainwater helps maintain the ground water table.

Traditional green motorable pathways were full of problems. They turn muddy with the passage of vehicles and the grass. We developed PEBBLE AND GRASS pavers to solve just that. These pavers are permeable which means they have holes where mud can be filled and grass can grow. The elevated pebbles hold the moving tyres and the grass stays intact below them. We succeeded to design a maintenance-free green pathway. What's more, rainwater just seeps through them and keeps the underground soil moist. In the event of underlying mud becoming uneven, it is effortless to remove the paver, set the mud and place the same tile back. These tiles do not break with the passage of vehicles year after year. Don't think about alternatives. Our customers are already reaping huge benefits from PEBBLE AND GRASS. Now it's your turn.
